

Micah Johnson

Full-stack engineer. I build systems and ship them to customers.

Kennedale, TX · micah@createsomething.io · LinkedIn · createsomething.io

I'm applying for the Software Engineer role.

"Maximum agency, tight feedback loops with customers, and no shortage of product challenges"—that's the job description, and it's also how I've spent the last five years at Webflow.

I build systems end-to-end. The App Submission Form handles retries automatically, catches duplicates, and tracks every submission from upload to delivery. The Dashboard gives creators asset management, version history, and analytics. The Validator checks templates against best practices—I wrote the performance-critical parts in Rust because JavaScript couldn't keep up. These aren't prototypes. They're what the marketplace runs on.

I also spent years working directly with customers. I started in support, helping 500+ people get unstuck. I led a team. I helped launch Webflow University 2.0. I learned how to take user feedback and turn it into features that actually solve problems.

Your stack is Python, TypeScript, and React on AWS. TypeScript and React are my daily tools. Python is what I use for AI work—I'm building an AI workflow platform on the side, learning what works with LLMs in production. AWS and workflow automation? That's the App Submission Form: cron jobs, retry queues, database tracking, the whole pipeline.

Mainstay is an AI-native company turning complex data into clarity. I want to help you do that for the single family rental space. I'm comfortable with ambiguity, I ship fast, and I care about building things that work.

— Micah Johnson

WEBFLOW

System Architect

Dec 2024 – Present

Marketplace Team

— Own backend and frontend for marketplace systems

— App Submission Form: PostgreSQL, automatic retries, duplicate detection, workflow automation

— Webflow Way Validator: TypeScript + Rust/WASM for performance-critical validation

Marketplace Operations Manager

Jul 2023 – Dec 2024

Marketplace Team

— Dashboard (SvelteKit/React patterns, AWS/Cloudflare): asset management, version history, analytics

— Migrated infrastructure from Vercel to Cloudflare for reliability and performance

On-Screen Educator

Mar 2020 – Apr 2021

Education Team

— Helped launch Webflow University 2.0

— Tight feedback loops: created content based on what users actually struggled with

Customer Support Specialist & Team Manager

Feb 2018 – Mar 2020

Support Team

— Helped 500+ customers solve technical problems

— Led a team—set direction, mentored, shipped improvements

SIDE PROJECTS

Founder

2023 – Present

CREATE SOMETHING · WORKWAY

— AI workflow platform—Python for LLM orchestration, TypeScript for frontend

— Learning what works with AI in production, not just demos

SKILLS

Languages: TypeScript, JavaScript, Python, Rust

Frontend: React, SvelteKit, Next.js

Backend: Node.js, PostgreSQL, REST APIs

Infrastructure: AWS, Cloudflare, Docker, Vercel

Automation: Cron jobs, retry queues, pipelines

AI: LLM orchestration, Python tooling

EDUCATION

Texas A&M University

Bachelor's Degree

UI/UX Design Certification

Boulder Digital Arts
