PandaDoc Hiring Team

Senior Web Developer

Hello,

I've spent my career becoming the person who bridges Marketing and Engineering. That's not a metaphor—it's literally my job history.

Your job description asks for someone who can "act as the technical translator between the Marketing and Product Engineering teams." I started at Webflow answering support tickets from marketing users. Then I created educational content for Webflow University, teaching non-technical teams how to ship. Then I ran content operations for the Template Marketplace. Now I architect the systems that power it all. **I've been the marketer's advocate at every layer of the stack.**

That progression means I understand what marketing teams actually need: the ability to ship campaigns fast, without filing tickets. Flexible content models that don't require a developer for every change. Performance and SEO that doesn't get sacrificed for speed. I've built these systems—and I've used them from the other side.

Your stack is my stack

Next.js (App Router), React, TypeScript, Vercel—this is what I ship in. I've built marketing sites on Vercel's edge network, worked with headless CMS architecture, and optimized for Core Web Vitals. The patterns transfer directly.

Content operations at scale

At Webflow, I manage content operations for a marketplace with thousands of templates. I've designed CMS models that empower marketing teams to ship independently. I know what "scale content operations" actually means in practice.

Marketing analytics depth

I work with Segment, Amplitude, and Census daily. A/B testing, conversion tracking, user journey optimization—I've built the infrastructure that turns experiments into insights.

AI integration is already in my workflow

I've documented 47 experiments in AI-native development at createsomething.io. I'm building WORKWAY with LLM-powered personalization. This isn't theoretical interest—it's production code.

"Ship it" mindset with architecture sense

I run two startups alongside my day job. I know when to ship fast and when to build for the long haul. Speed and learning matter, but so does not creating tech debt that slows you down later.

PandaDoc's positioning—turning the website into a revenue engine—resonates with how I think about web development. The site isn't a brochure; it's infrastructure for acquisition. Every millisecond of load time, every CMS model decision, every A/B test framework choice compounds into growth or friction.

I'd welcome the chance to discuss how my experience bridging Marketing and Engineering could help pandadoc.com become the growth engine you're building toward.

Looking forward to the conversation,

Micah Johnson
