Wiz Hiring Team

Senior Support Systems Engineer

Hello,

I've been the support manager waiting for the tools you're building. I know exactly what breaks, what slows teams down, and what leadership actually needs to see in dashboards—because I've lived it.

At Webflow, I spent two years leading the support team. I saw firsthand what happens when ticket routing is manual, when visibility into backlog is a spreadsheet, and when support managers have to beg engineering for the tools they need. So I started building them myself—LMS systems for onboarding, dashboards for performance tracking, integrations to connect our support stack.

That experience shaped everything I've done since: marketplace operations, system architecture, and now building WORKWAY—an automation platform where AI-powered workflows route and manage work intelligently. **I'm not a tools engineer guessing what support teams want. I'm a former support leader who became an engineer because I got tired of waiting for better tools.**

Support operations from the inside

Two years as Support Team Manager at Webflow—hiring, performance management, process optimization. I know the operational pain points because I've had to solve them with inadequate tools.

Built internal support applications

Created onboarding LMS, ticket workflow systems, and performance dashboards at Webflow. Translated operational needs into technical solutions that actually got used.

AI-powered workflow expertise

Documented 47 AI experiments at createsomething.io. Currently building WORKWAY with intelligent routing that analyzes, tags, and routes work to appropriate teams. This isn't theoretical—it's production code.

Snowflake and data infrastructure

Currently working with Snowflake, Census, Amplitude, and Segment at Webflow to build data pipelines that give leadership visibility into operations.

Python + web frameworks

Primary stack is TypeScript/JavaScript (12+ years), with Python for automation and scripting. REST APIs, GitHub workflows, technical documentation—these are daily work.

The job description mentions building "AI-powered workflows to agentically analyze, tag, and route incoming support tickets." That's almost word-for-word what I'm building at WORKWAY. The only difference is I'm doing it for workflow automation broadly—you're doing it for support operations specifically. The patterns are identical.

Wiz's growth trajectory is remarkable—fastest-growing startup ever, 50% of Fortune 100 as customers. That kind of scale creates exactly the operational challenges that good internal tooling solves. I'd welcome the chance to discuss how my experience—both as a support leader and as a systems engineer—could contribute to Wiz's support operations excellence.

Looking forward to the conversation,

Micah Johnson
