

Micah Johnson

Full-stack engineer. Rust in production. Five years helping customers succeed.

Kennedale, TX · micah@createsomething.io · LinkedIn · createsomething.io

I'm applying for the Full-Stack Software Engineer role.

You're looking for someone who can write Rust, build full-stack systems, and work directly with customers. I've done all three—at the same time.

At Webflow, I built the Webflow Way Validator, a Designer Extension that checks templates against best practices. It validates design systems, components, styles, SEO, and accessibility. JavaScript was too slow for large projects, so I wrote the performance-critical parts in Rust and compiled to WASM. It runs 3x faster now. That's not a side project—it's in production, used by template creators every day.

I also built the App Submission Form (Next.js, PostgreSQL) and the Webflow Dashboard (SvelteKit, Cloudflare). These are the systems that power marketplace operations—handling retries, tracking submissions, managing assets with version history and rollback.

Before building systems, I spent years working directly with customers. I started in support, helping 500+ people get unstuck. I led a team. I moved to Education and helped launch Webflow University 2.0—creating content for everyone from beginners to developers. I learned how to explain complex technical concepts to different audiences.

SpruceID's forward-deployed engineering model—building alongside customers, translating requirements into production systems—is exactly how I work. The difference is the domain: identity and credentialing instead of web design. I don't have direct experience with Verifiable Credentials or DIDs, but I learn fast, and I understand why privacy-preserving identity matters.

I'm based in Texas, comfortable with remote work, and excited about mission-driven technology. I'd love to help state governments and public sector partners build better identity infrastructure.

— Micah Johnson

WEBFLOW

System Architect

Dec 2024 – Present

Marketplace Team

- Build the systems that power our template and app marketplace
- Created the Webflow Way Validator—a Designer Extension built with TypeScript and Rust/WASM. Validates design system, components, styles, SEO, and accessibility. Runs 3x faster on large projects
- Built the App Submission Form (Next.js, PostgreSQL)—handles retries automatically, catches duplicates, tracks submissions end-to-end

Marketplace Operations Manager

Jul 2023 – Dec 2024

Marketplace Team

- Built the Webflow Dashboard (SvelteKit, Cloudflare D1/KV/R2)—asset management, version history, analytics. Migrated from Vercel to Cloudflare
- Contributed to the Airtable integration connecting dashboard to marketplace data

On-Screen Educator

Mar 2020 – Apr 2021

Education Team

- Helped launch Webflow University 2.0
- Created tutorials for everyone from first-time users to developers building integrations

Customer Support Specialist & Team Manager

Feb 2018 – Mar 2020

Support Team

- Helped 500+ customers get unstuck—technical problems, implementation questions
- Led a team of support specialists

SIDE PROJECTS

Founder

2023 – Present

CREATE SOMETHING · WORKWAY

- Building an AI workflow platform. Learning what works with LLMs in production
- Full-stack: React, SvelteKit, TypeScript, Cloudflare Workers

SKILLS

Languages: TypeScript, JavaScript, Rust, Python**Frontend:** React, SvelteKit, Next.js**Backend:** Node.js, PostgreSQL, REST APIs**Infrastructure:** Cloudflare, Vercel, AWS**Rust:** WASM compilation, performance optimization**People:** Customer-facing technical work

EDUCATION

Texas A&M University

Bachelor's Degree

UI/UX Design Certification

Boulder Digital Arts
