Huntington Bank Hiring Team

API Governance Lead (Job ID 8117)

Hello,

I am applying for the API Governance Lead role because it sits at the intersection where I do my best work: establishing clear standards, aligning cross-functional teams, and turning architecture policy into repeatable execution.

Across platform and architecture roles, I have consistently led initiatives that required governance discipline over pure feature delivery. I define interface standards, establish lifecycle expectations, and build practical controls into delivery workflows so teams ship consistently and securely. My focus is always the same: reduce variance, improve reliability, and give leadership measurable confidence in outcomes.

Governance and standards leadership

Built and rolled out organization-wide standards for API and integration design, including naming conventions, versioning expectations, and reusable policy artifacts for delivery teams.

Lifecycle and platform operations

Operationalized onboarding, publishing, and change-control workflows with clear review gates and documentation, helping teams manage API lifecycle decisions with less operational risk.

Security and compliance alignment

Partnered with engineering and operations stakeholders to align integration patterns with IAM/security requirements, and to maintain audit-friendly documentation and controls.

Policy-aware automation in CI/CD

Integrated quality and policy checks into delivery pipelines so standards are enforced early, not retrofitted after release.

Cross-functional influence

Led technical initiatives spanning architecture, product, operations, and delivery teams, translating policy into clear working agreements teams actually adopt.

While my recent work has spanned multiple platform stacks, the governance primitives map directly to your Apigee X context: API products and proxies, lifecycle controls, policy enforcement, analytics-driven maturity tracking, and stakeholder governance forums.

I am open to the hybrid schedule in Columbus, Minneapolis, or Dallas and would welcome the chance to discuss how I can help Huntington strengthen API governance with measurable compliance and delivery outcomes.

Thank you for your consideration,

Micah Johnson
