

Micah Johnson

Full-stack engineer. Python + TypeScript. Five years building production systems.

Kennedale, TX · micah@createsomething.io · LinkedIn · createsomething.io

I'm applying for the Full Stack Engineer role.

You're looking for someone with Python and JavaScript, PostgreSQL, and the ability to work independently. I've built production systems with all of these.

My Python work includes a CLS (Cumulative Layout Shift) analyzer—automated browser testing with Selenium, Chrome DevTools Protocol for network throttling, multi-viewport responsive testing, and pandas for data analysis. It runs headless, simulates real network conditions, and generates actionable performance reports. That's the kind of tooling I enjoy building: something that solves a real problem and works reliably.

On the JavaScript/TypeScript side, I've built production systems at Webflow for five years. The App Submission Form (Next.js, PostgreSQL) handles retries, catches duplicates, and tracks submissions end-to-end. The Webflow Dashboard (SvelteKit, Cloudflare) manages assets with version history and rollback. I also built a Webflow App with Rust/WASM for performance-critical validation—3x faster than the JavaScript version.

Before building systems, I worked directly with customers. I started in support, helping 500+ people get unstuck. I led a team. I moved to Education and helped launch Webflow University 2.0. I learned how to work independently and communicate clearly—both skills you mentioned in the job description.

SkySafe's domain is new to me—drone detection and airspace intelligence—but I learn fast. The technical stack aligns well: Python backend, React frontend, PostgreSQL, cloud infrastructure. The GIS nice-to-have is interesting; I'd enjoy learning Mapbox and working with spatial data.

I'm based in Texas, a US citizen, and comfortable with remote work. I'm excited about the chance to build software that makes skies safer.

— Micah Johnson

WEBFLOW

System Architect

Dec 2024 – Present

Marketplace Team

- Build the systems that power our template and app marketplace
- Built the App Submission Form (Next.js, PostgreSQL)—handles retries automatically, catches duplicates, tracks submissions end-to-end
- Created the Webflow Way Validator—TypeScript + Rust/WASM for 3x faster validation on large projects

Marketplace Operations Manager

Jul 2023 – Dec 2024

Marketplace Team

- Built the Webflow Dashboard (SvelteKit, Cloudflare)—asset management, version history, analytics
- Contributed to the Airtable integration connecting dashboard to marketplace data

On-Screen Educator

Mar 2020 – Apr 2021

Education Team

- Helped launch Webflow University 2.0
- Created tutorials for everyone from beginners to developers

Customer Support Specialist & Team Manager

Feb 2018 – Mar 2020

Support Team

- Helped 500+ customers with technical problems and implementation questions
- Led a team of support specialists

SIDE PROJECTS

CLS Analyzer

Python

Web Performance Tool

- Automated browser testing with Selenium and Chrome DevTools Protocol
- Multi-viewport responsive testing, network throttling simulation
- Data analysis with pandas, headless execution

Founder

2023 – Present

CREATE SOMETHING · WORKWAY

- Building an AI workflow platform with Python and TypeScript
- Full-stack: React, SvelteKit, Cloudflare Workers

SKILLS

Python: Selenium, pandas, automation

Databases: PostgreSQL, Cloudflare D1

Testing: Automated testing, CI/CD

JavaScript/TS: React, Next.js, SvelteKit

Infrastructure: Cloudflare, Vercel, AWS

Performance: Rust/WASM, optimization

EDUCATION

Texas A&M University

Bachelor's Degree

UI/UX Design Certification

Boulder Digital Arts
