Office Hours Hiring Team

Full Stack Software Engineer

Hello,

Most knowledge stays locked in people's heads because extracting it is too hard. I've spent my career building systems that make that extraction feel effortless.

Your job description reads like my current work: "discovery, recommendations, data pipelines, logistics, payments, compliance"—and behind it all, a knowledge graph connecting everything. At Webflow, I work on the marketplace infrastructure that does exactly this. The surface is simple (search, match, connect); the system underneath is anything but.

My path has been unusual: customer support team manager → on-screen educator → marketplace operations → system architect. That progression means I understand marketplaces from every layer—from the support tickets that reveal where matching fails, to the educational content that helps users find what they need, to the data infrastructure that powers discovery. I've worked with Census, Snowflake, Amplitude, and Segment to build pipelines that turn raw user behavior into actionable insights.

Marketplace systems from the inside out

I've touched every layer of Webflow's marketplace—support, education, operations, architecture. I know what makes matching work and what makes it fail. That breadth is rare.

Your stack is my stack

Node.js, TypeScript, React, Next.js, Tailwind—this is what I ship in. I've worked with MongoDB and Postgres, built search systems, and designed APIs. The tooling overlap (GitHub, Slack, Notion, Figma, PostHog) means I can contribute immediately.

Building the same thing on the side

I'm building WORKWAY—an open marketplace for TypeScript workflows with knowledge graph architecture. Same thesis as Office Hours: unlock what people know, make the matching feel invisible.

Product-minded by experience

I've been the support rep, the educator, and the system designer. That means I think about user problems first, implementation second. Shipping polished experiences requires understanding what users actually need.

I'm drawn to Office Hours because you're building infrastructure for the knowledge-sharing economy—not just a product, but a category. The backing from operators like Lenny Rachitsky and Marco Zappacosta signals you understand what it takes to build a marketplace that actually works.

I'd love to discuss how my marketplace experience could contribute to what you're building.

Looking forward to the conversation,

Micah Johnson
